

Creating a clean
and healthy work environment,
with you in mind.

The image shows the interior of a UV-C disinfection chamber. Several long, glowing blue tubes are mounted on the walls and ceiling, emitting a bright blue light. A control panel with three green indicator lights is visible on the upper right wall. The chamber has a metal floor with a textured mat and a door with red handles. The overall atmosphere is clean and technical.

We're committed to help your teams return with confidence to a healthy and safe workplace.

Based on the latest CDC and industry guidance, our building has added UV-C disinfection technology to help reduce disease transmission and enhance air quality.

We've Installed Protective Measures

Both the Centers for Disease Control & Prevention (CDC)* and the American Society of Heating, Refrigerating and Air-Conditioning Engineers recommend germicidal UV-C to protect against airborne viruses.

Following this guidance we have installed UV-C technology to reduce the spread of infectious microbes.

Proven Infection Mitigation At Work

Used in hospitals for decades, UV-C energy is one of the oldest means of inactivating germs and infectious pathogens, so they can't replicate.

Deploying germicidal UV technology to disinfect HVAC airstreams and surfaces is an important component of our multilayered infection control strategy.

UV-C light

Mold growth before UV-C

UV-C damage prevents replication

Mold growth after UV-C

RLM Xtreme 360-degree lamp system

Effective Airstream Disinfection

Germicidal UV-C air disinfection systems have been installed in the building's HVAC ductwork to disinfect airstreams to reduce germs and pathogens.

X-PLUS NEMA 4X rated fixture

Upper-Room Decontamination

Germicidal lamp fixtures installed near a room's ceiling are able to inactivate germs in mere seconds as contaminated air is lifted into the germicidal zone. And, since UV energy is overhead, team members are safe to go about their normal business.

GLO™ 225 upper room UV fixture
